

5. (Once Amended) The arrangement of claim 1 wherein the user interface is a microphone and user code is a sound created by the visitor.

6. (Once Amended) The arrangement of claim 2, wherein the signal transmitter is a speaker and the response signal is an audio signal.

7. (Once Amended) The arrangement of claim 1 further comprising a computer for providing the response signal to the signal transmitter.

8. (Once Amended) The arrangement of claim 7, wherein the signal transmitter is a speaker and the response signal is an audio signal.

9. (Once Amended) The arrangement of claim 8 wherein the signal generator is a first communication device and the response signal is a radio frequency signal.

13. (Once Amended) A method of identifying a visitor by using a doorbell arrangement having a user interface for entering a user code, the method comprising: receiving the user code via the user interface wherein the user code is indicative of the visitor;

*AB*  
*cont.*

automatically identifying the visitor from the user code; and  
transmitting a signal in response to the identification of the visitor, wherein the signal is indicative of the visitor.
